Bona ErgoEdge Kit

178 mm edge sanding system for Bona FlexiSand 1.9

The Bona ErgoEdge Kit is designed for sanding closer to walls and edges using the Bona FlexiSand 1.9 with Power Drive Connect. Its concave sanding discs concentrate pressure towards the outer edge for effective edge sanding.

PRODUCT FEATURES

- 4 special 178 mm drive plates
- 4 intermediate pads
- 1 distance wheel
- For FlexiSand 1.9 with Power Drive Connect
- Edge sanding only

IMPORTANT OPERATING INFORMATION

The concave design increases sanding pressure at the outer edge. This can increase friction and motor load,
making the machine more difficult to handle. Starting and running performance may be affected by the electrical supply conditions on-site.
If the motor struggles to start, fails to reach normal speed, or runs abnormally with the ErgoEdge Kit, stop using the kit under these conditions.
Where appropriate, a finer abrasive may reduce the load: change from P36 to P50, or from P50 to P60. This is not a guaranteed solution and depends on the available electrical supply and working conditions.
If starting difficulties or abnormal operation continue, do not continue sanding with the ErgoEdge Kit.
Check the power supply and use an alternative sanding method if necessary.
Do not use additional weights on the FlexiSand 1.9 with the ErgoEdge Kit. Additional weight may damage the kit and/or the machine. Read the machine manual and observe all safety instructions
